

The function of "Statistics" is generally used to analyze a set of data.

Here are examples to illustrate the use of statistical functions:

1 Run astrolog32.exe

2 From File menu, select astro-databank database...

3 From **Categories** combobox select an item, for example "Criminal Victim"

4 Click "**Filter**" button

...We have obtained a set of 'Criminal Victim' data(2095 pieces of data in total)

5 Click "**Statistics**" button.

The statistical results will be displayed in another pop-up window.

With the reference to the natal chart, they are:

-Sun Sign:

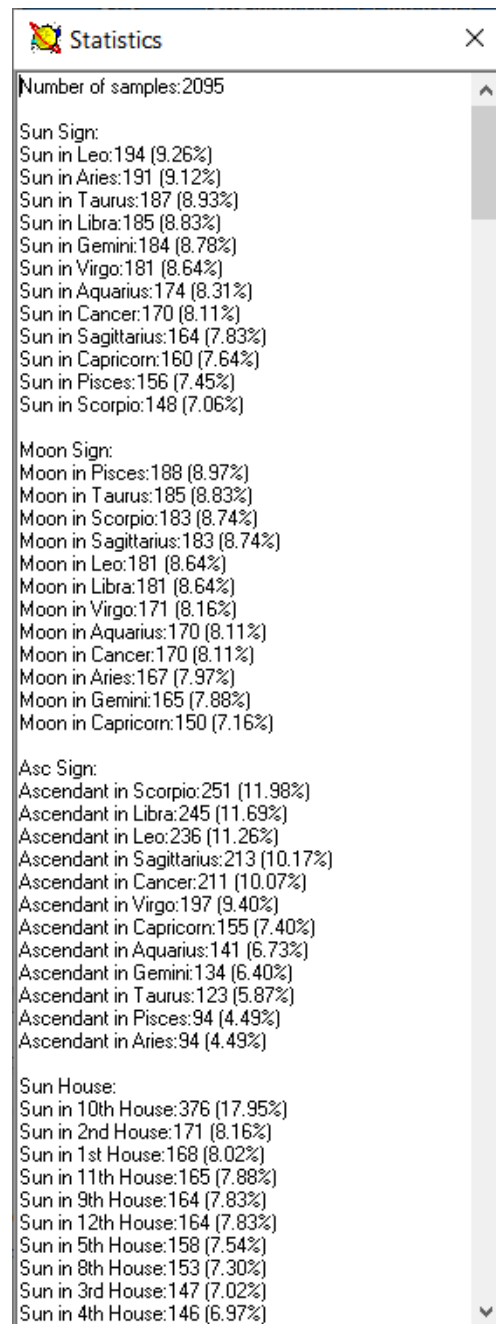

-Moon Sign:

-Asc Sign:

-Sun House:

-Moon House:

Moreover: How to use the new field at the bottom “SQL SELECT”

**(Tip: Use the copy-paste function from the examples below to activate a request in the new field...)**

example 1: People **over 80 years old**

In SQL SELECT text box, type in:

```
SELECT * FROM PERSON where age>80;
```

Then click the button on the right side of the text box, you can get your result.

example 2: **Astrologer**

In SQL SELECT text box, type in:

```
SELECT * FROM PERSON where Categories Like '%Astrologer%';
```

Then click the button on the right side of the text box, you can get your result.

example 3: **Blonde**

In SQL SELECT text box, type in:

```
SELECT *FROM PERSON where Categories Like '%blonde%';
```

Then click the button on the right side of the text box, you can get your result.

example 4: **Our Fallen**

In SQL SELECT text box, type in:

```
SELECT * FROM PERSON where note Like '%Our Fallen%';
```

Then click the button on the right side of the text box, you can get your result.

example 5: **Murder**

In SQL SELECT text box, type in:

```
SELECT * FROM PERSON where note Like '%Murder%';
```

Then click the button on the right side of the text box, you can get your result.
